AXIOM
IT SOLUTIONS INC.

What is it?

FIREMON is a complete fire effects monitoring and inventory package that helps you collect, store and analyze data related to your prescribed and wildfire management projects.

How can it help you?

Helps you design an appropriate sampling scheme.

Assists in choosing the sampling methods and intensities that are right for your project.

Supplies field crews with detailed, field reviewed sampling instructions for each field collection method, including data sheets.

Provides you with a full database for data storage.

Helps you develop reports and provides data analysis with the built-in analysis tools.
